Nitix for Sage Accpac ERP

# Nitix for Sage Accpac ERP

- A completely new way to think about your accounting server. ■

## **Built by Net Integration. Optimized for Sage Accpac ERP.**

Most computer systems are *generic*. They're designed with many separate, interchangeable parts: parts you can choose one by one and assemble into a final product. This gives you lots of flexibility, but the downside is complex decisions, hours of labour... and inconsistent results.

Sage Software approached us with a new idea: a specially configured server platform designed especially to host Sage Accpac ERP. We combined the right hardware, a highly robust, reliable operating system, two available database engines (IBM DB2 or Pervasive.SQL), and our automatic backup/restore and disaster recovery technology. We made it a drop-in replacement for your existing Windows-based Sage Accpac server, without changing the end-user experience at all.

Then we tested it to ensure that it can be easily installed and configured and that your data is protected.

What did we get? A highly optimized server, designed from the ground up for Sage Accpac ERP. And it works.

## **Everything you need in an accounting server.**

- Nitix operating system with integrated backup and disaster recovery
- Database engine (IBM DB2 or Pervasive.SQL)<sup>1</sup>
- Sage Accpac sample databases
- Optionally bundled with hardware platform

## **There's nothing new to learn.**

Nitix for Sage Accpac ERP replaces only the Windows-based database server you already needed for the back office.

You still run the same version of Sage Accpac ERP. Users still run Windows. Even the database is the same: IBM DB2 or Pervasive.SQL.

<sup>1</sup> Database server license sold separately. Trial license is included.

## ■ A serious accounting server made simple. ■

### **Fast installation & zero maintenance.**

A single install CD includes the operating system, backup software, database engine, and Sage Accpac sample databases. It installs in just a few minutes with just a few mouse clicks. We tuned the database and backup software for optimal performance with Sage Accpac.

### **Everything in one place.**

Nitix contains everything you need for an accounting server. There's no blame shifting or finger pointing. No uncertainty.

### **Ultimate security.**

Built for maximum security, Nitix is designed without all the unnecessary features and services that lead to security and stability problems. Nitix is also immune to all Windows-based viruses and worms.

### **Always compatible.**

We test every new release with multiple versions of Sage Accpac ERP to ensure all the pieces work together properly.

### **You can keep Windows on your Desktop**

Nitix replaces only the server, not the user's workstation. An end user will never see any difference. Even the database is the same: IBM DB2 or Pervasive.SQL.

### **It's easy to switch.**

Sage Accpac ERP includes a "Database Copy" tool that makes it possible to migrate your data in minutes from your old Windows-based server to Nitix..

### **Tested and Recommended by Sage.**

Who better to recommend a platform for your Sage ACCPAC ERP system?

## ■ Worry free data backup and recovery ■

### **Automatically safeguard your data.**

From the first moment it's installed, Nitix starts protecting your data. It combines multiple levels of redundancy - RAID, idb backups, and emergency backups - to keep you safe. And all this happens unattended, with no special setup, no extra software, and no daily maintenance.

#### **1. RAID Mirroring**

The entire Nitix system, including all your data, is kept in a RAID1 disk mirror. If your primary disk fails, Nitix switches to the mirror and keeps going, without missing a beat.

#### **2. idb - Intelligent Disk Backup**

Your data is automatically backed up once an hour to an idb disk. One idb disk can contain many months of backup history, so you can go back in time to track down database corruption or auditing inconsistencies. You can swap the idb disk as often as you choose, to ensure you have off-site backups.

#### **3. Emergency Database Backups**

Every night, Nitix automatically makes an extra copy of your accounting data. That means there are always four copies of your data available: two on the primary disk, and two on the mirror.

#### **4. SystemER - Emergency Recovery in Minutes**

Nitix backs up everything, including the operating system, the database engine, and the database contents. SystemER technology allows you to easily restore the entire system - operating system and all - even to a completely blank, "bare metal" new server. And because idb is based on high-speed disks instead of slow tapes, you can recover from any hardware failure in minutes, not hours or days.
